KIDD .22 Trigger Blade Installation

Thank You for purchasing a KIDD Two-Stage Trigger Blade.

You must remove the trigger from the receiver so that you have a top down view. Pry the main spring retainer, spring and strut from the top of the unit. Put the safety on so that the hammer and sear do not become locked. You will be able to see two hex screws with the hammer spring out of the way. Loosen the 1/16th hex so that the trigger blade and dowel pin can be pulled back. Then put the new trigger blade in and do everything in reverse.
